Getting it done!

Your value adding partner in Loading Technology

Your value adding partner in Loading Technology

We are MOB Mechanical Contracting, a value adding partner offering a full service concept on marine and land loading arms. We fulfil an essential role in the industry, providing tailored solutions to all our customers and ensure their loading arms are ready to use. Whether it's installing or commissioning loading arms, taking care of periodical inspections, maintenance and repairs, implementing modifications and overhauling or providing refurbished loading arms. When customers present us challenges, we deliver solutions.

Let's give you a quick introduction in our way of working: we carry out inspections on site and develop an inspection report. Based on the outcomes we set up a priority list which our customers can follow up based on their budget. In this way they have the guarantee that their loading arms are always of top-quality.

A customer oriented approach

Our growth is what defines us. We continuously invest in our people and our company to deliver operational excellence. We operate on a worldwide basis, serving customers in several industries such as tank terminals, pharmacy, petrochemical, FMCG and chemical. We revamp and repair all types and brands and are fully equipped to serve our customers fast and efficient. In order to serve our customers in the best way possible, we offer 24/7 support on site and from our locations in The Netherlands and Belgium.

Delivering the highest quality

Engaging in long term partnerships with manufacturers enables us to use their original (spare) parts. We are empowered by our customers and have strong relationships with (inter)national customers such as Kanon, FMC Technologies, Woodfield and ExxonMobil. We are also strongly committed to the 'right the first time principle' and guarantee the highest quality at every project. Delivering top-quality is how we differentiate ourselves.

Safety first

We work in a high-risk environment in which accidents can easily happen. We think it is important that all our employees should be able to work in a safe environment and return home safe every day. Therefore, our zero accidents goal has top priority. Our HSEQ system consists of several safety principles. Before we start working on a new project, we execute a LMRA to identify all (potential) safety, health and environmental risks and take action to prevent any accidents. We also work with a lifting plan when installing loading arms to ensure this is done in the safest way possible. Next to that, our employees always work while wearing the necessary PPE's.

Dedicated experts

Our people make the difference. They never cease to show their involvement in the company by giving it their all. Trained by manufacturers, they are highly skilled, experienced and specialists in repairs. As dedicated professionals they have an extraordinary understanding of our customers' needs. Whether they work on site or in the shop, our people contribute to the growth of our organisation and that of our customers.

A word from our customers

Jacques Braams,
working at Service Terminal Rotterdam (STR)

"Due to professional support, skilled workers and 24 hrs services we did not doubt for one minute to continue the inspections, repairs and renewals with MOB. As Terminal manager from an independent oil Terminal established in Rotterdam I confirm that we are very satisfied over the performed works carried out by MOB. Their knowledge about all kind of Marine loading arms from different makers is enormously, long delivery items like swivel joints from the makers for loading arms are in the past due to the brand new solutions MOB can offer. Summarized, we are glad to have found an trustful company and look forward for an long cooperation."

Jurgen Leys,
working as a contractor

"As a contractor working in a refinery I had the opportunity to work with MOB for the inspection and maintenance of the marine loading arms. The biggest advantage I've experienced was the fact that MOB can maintain/inspect loading arms of different vendors making them a single source point for all issues concerning our assets. The technicians we had on site had the needed background (mechanical, hydraulic, electrical, instrumental) to complete the given work within a reasonable timeframe and within expected quality expectations. Their input on preventive maintenance, inspection intervals and modifications resulted in a higher reliability and availability of our loading arms. Thanks to the Service level agreement including 24/7 standby our downtime due to unforeseen problems was brought down minimizing the demurrage costs. Overall MOB profiled themselves as a professional and trustworthy partner for our loading equipment."
